

## RWY 21

| PAPI 3,5"                                                                           |                                         |        |        |
|-------------------------------------------------------------------------------------|-----------------------------------------|--------|--------|
| Pilot's eye height over the threshold when the following PAPI lights come into view | RUNWAY                                  |        |        |
|                                                                                     | 03                                      | 21     |        |
|                                                                                     | 2 white lights and 2 red lights (MEHT)* | 21.24m | 17.72m |
|                                                                                     | 3 white lights and 1 red light          | 22.27m | 19.29m |
|                                                                                     | 4 white lights                          | 24.75m | 20.87m |

\*MEHT : Minimum Eye Height Over the Threshold.

Note : Aircraft with eye-to-wheel height greater than 6.3 metres are advised to fly with 2 white and 2 red lights visible so as to achieve sufficient wheel clearance

- 2) Pilots are required to keep their turns within Selatar Control Zone.
- 3) Pilots are required to keep clear of Sembawang ATZ and Pava Lebar CTR.
